About Us

We have added the casting machinery industry to this adventure that we started with the construction industry in 1986, with the good results we have obtained from our R&D studies since 2018.

We are ready to support you at all times with our experienced staff who have breathed the foundry atmosphere for years and have a wide competence network. In addition, we can respond to companies that want to make new investments, and offer alternative solutions for machines, lines and equipment with the features they are looking for. We have adopted the production of quality products and have adopted the principle of providing the best service to you. Satisfying you will always be our priority.
