About Us

In 1997, our company started its activities by Hasan Pullukçu by making electro zinc galvanized coating as Pullukçu Galvaniz Coating. While there were only cr+6 passivations in the first years of its establishment, the application process was started in 2007 for the passivations with cr+3 valence. Our company started its first establishment in 1997 in a 90 m2 small workshop and has been operating in a short time on 250 m2 500 m2 and now 1200 m2 with a purification system. We have added some machinery production as a service to the coating industry in our activities.
