About Us

Designed to be used in all open areas such as cafes, restaurants, gardens and balconies, the Hot Table (Ufolu Table) challenges all heating systems with a consumption of only 75 krch per hour. It is the most ideal heating method for establishments such as cafes and restaurants. Today, overhead heating systems can cause headaches and many diseases. The ideal heating method is from the bottom. Today, many people suffer from foot problems and suffer from many serious diseases.
