About Us

We are happy to share our knowledge and experience with our valuable customers. Our human and environment focused products offer practical, hygienic and modern esthetic solutions suitable for every environment. The upper surface of our disposable products is cellulose and bottom surface is polyethylene. Thanks to its laminated lower surface, it does not permeate fluid to bottom layer. Our hygienic, economical and soft texture products are degradable / dissolve without giving harm to the nature. Manufacturing is performed with the principle of leaving a clean environment to next generations based on human health for our final consumers with our wide product range such as disposable table cover, linen, stretcher cover, patient scrubs, baby feeding bibs. Our disposable printed or non-printed products ideal for using it
