Hakkımızda

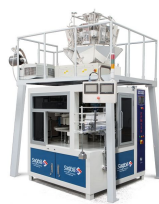

It was established in 1962 by Mehmet Ali Sağbili as a small lathe workshop in Konya. Since its establishment, it has served as "manufacturing of sub-industry products" in a wide range from agriculture to industry. In addition to the quality of the spare parts it has produced, it has also contributed greatly to keeping our national capital within the borders of the country. Throughout its existence, it has tried to follow the developing technology day by day and has become one of the biggest supporters of the country's industry, especially in Konya, with its investments in the machinery park.
